SUMMARY

Full Stack Engineer with a strong specialization in Frontend development, focused on React, TypeScript and Next.js. Experienced in frontend architecture, reusable systems, state management, API integration, authorization, performance and cross-layer debugging. Professional experience spans international product teams and independent projects, with growing ownership over technical decisions, integrations and delivery. Uses AI-assisted development as an engineering methodology, directing and evaluating implementations while retaining responsibility for architecture, technical decisions, debugging and validation.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, HTML, CSS, Zustand, React Router, Tailwind CSS, MUI

Architecture & Integration: Frontend Architecture, REST APIs, Frontend-Backend Integration, WordPress Headless, Microfrontends / Module Federation

Full Stack: Node.js, Fastify, PostgreSQL, Prisma, WebSockets / Socket.IO

AI-Assisted Development: Claude Code, prompt engineering, AI-assisted implementation, output evaluation, MCP Servers

Testing & Quality: Vitest, React Testing Library, MSW, TDD

Performance: Rendering Optimization, State Optimization, Caching, Request Optimization

Integration & Security: Authentication, JWT, RBAC

Engineering: Git, GitHub, Pull Requests, Code Review, GitHub Actions

Accessibility: Semantic HTML, ARIA, Keyboard Navigation, WCAG Principles

PROFESSIONAL EXPERIENCE

IPH | Frontend Engineer | May 2024 – Present

Real-time geolocation and traceability platform for underground mining operations, developed in an international cross-functional product environment.

- Designed and implemented the Frontend RBAC architecture, centralizing permission rules across routes and components and coordinating authorization contracts with Backend.
- Worked within a multi-repository microfrontend architecture, contributing to modular Frontend development while preserving clear boundaries between applications.
- Designed and implemented reusable frontend architecture, including TableGeneralContainer, later adopted as a standard for administrative list interfaces.
- Modeled application state and centralized cross-cutting rules, while contributing to Frontend-Backend contracts and reusable component systems.
- Investigated and resolved UI, integration, state, authorization, performance and build problems through cross-layer debugging and technical investigation.
- Applied frontend testing practices with Vitest and React Testing Library, including a first practical experience with TDD in a professional environment.
- Provided technical guidance through code reviews, documentation, onboarding/training and coordination with other developers, while taking ownership of technical outcomes without formal management authority.

FREELANCE | Frontend / Full Stack Developer | Mar 2023 – Present

Terragene — Corporate Web Platform

- Developed and evolved a Next.js frontend within a WordPress Headless architecture, integrating Backend services and external systems.
- Defined frontend structure with separation between presentation, data access and application logic, and participated in architecture and integration decisions.
- Investigated open-ended integration problems across Frontend, Backend and third-party services, designing alternative solutions when external systems imposed constraints.
- Configured production infrastructure and deployment automation using Nginx, PM2, environment variables and GitHub Actions.

- Translated functional requirements into technical solutions and coordinated with Backend, Project Management and the client.

Psychology Practice — Professional Website

- Designed and developed a React frontend with React Router, reusable components, responsive behavior and integrated forms.
- Implemented validation, error handling, external service integration, publication and post-delivery maintenance.

Law Firm — Institutional Website

- Independently designed and implemented an institutional website using HTML, CSS and JavaScript/jQuery, including responsive behavior, contact functionality, publication and ongoing maintenance.

SELECTED PERSONAL PROJECTS

FleetOps — Full Stack Project | 2026

- Designed and directed a Full Stack architecture combining Next.js, Fastify, PostgreSQL, Prisma, REST APIs and WebSockets.
- Designed the separation between REST operations and realtime communication and resolved consistency issues across API responses, WebSocket events, client state and persistence.
- Designed shared JWT authentication and RBAC across Frontend and Backend and optimized realtime map rendering through more granular state subscriptions.
- Evaluated architectural trade-offs, including Fastify versus NestJS, according to project scope and complexity.
- Directed a 100% AI-assisted development workflow while retaining responsibility for architecture, technical decisions, implementation direction, output evaluation, debugging and adjustments.

Taste Labs Assessment — AI-Assisted Frontend Assessment | 2026

- Reconstructed a pixel-perfect React and Tailwind interface using Claude Code as an explicitly evaluated AI development assistant, directing implementation through prompting and evaluating generated output against the target behavior.
- Changed the prompting strategy when the initial approach failed to converge, then extended the requested scope with additional product sections and a WebGL2/GLSL visual pipeline.

Rick & Morty Wiki + Microfrontend Architecture — Personal Frontend Projects | 2025 – 2026

- Built and evolved a Next.js, React and TypeScript application with Redux Toolkit, persistence, API integration and automated testing.
- Redesigned API consumption after rate limiting by introducing caching, local filtering, request control, exponential backoff and mock fallback.
- Built a Vitest and React Testing Library suite covering components, hooks, pages, stores, providers, asynchronous effects, mocked requests and error states.
- Built a practical microfrontend architecture using Module Federation, exploring independent application boundaries and integration patterns across frontend modules.
- Evaluated microfrontend trade-offs and integration constraints as part of a broader exploration of modular frontend architecture.

EDUCATION & PROFESSIONAL DEVELOPMENT

Henry: Full Stack Web Development · Jul 2023 – Mar 2024

Henry: AI Engineering · Aug 2026 - Present

Universidad de Buenos Aires: Design Studies · 2014 – 2016
